receiving instructions to disable the determining and screening steps.

A | 6. (Original) The method of claim 3, wherein
the instructions further indicate a period of time to perform screening;
and
the determining and screening steps are performed from the period of
time.

7. (Original) The method of claim 3, wherein the screening step
comprises:
connecting the wireless call with an audio message.

8. (Original) The method of claim 7, wherein the screening step
further comprises:
connecting the wireless call to a predetermined destination after a
predetermined period of time elapses from completion of the audio message.

9. (Original) The method of claim 3, further comprising:
receiving second instructions with a new defined area to use in the
screening step.

10. (Original) The method of claim 2, wherein the screening step
comprises:
connecting the wireless call with an audio message.

A) 11. (Original) The method of claim 10, wherein the screening step
further comprises:
connecting the wireless call to a predetermined destination after a
predetermined period of time elapses from completion of the audio message.

12. (Canceled)

13. (Currently Amended) The method of claim [[12]] 2, wherein the
initiating step initiates the determining and screening steps when the number
of wireless calls located within the predetermined distance of one another are
received within a predetermined period of time.

14. (Original) The method of claim 13, wherein the period of time
varies depending on a location of origination for the number of wireless calls.

15. (Currently Amended) The method of claim [[12]] 2, wherein the number of wireless calls varies depending on a location of origination for the number of calls.

16. (Currently Amended) The method of claim [[12]] 2, wherein the predetermined distance varies depending on a location of origination for the number of wireless calls.

A1
17. (Currently Amended) The method of claim [[12]] 2, wherein the wherein the screening step comprises:

connecting the wireless call with an audio message.

18. (Currently Amended) The method of claim [[12]] 2, wherein the receiving a wireless call step receives an emergency call.

19. (Currently Amended) A method of performing a predetermined action on wireless calls, comprising:

receiving a wireless call;

determining whether the received wireless call falls within a class of wireless calls the class of wireless calls being one of location incentive offers, wireless based games, and wireless location based advertisements; and

performing a predetermined action on the received wireless call when the determining step determines that the received wireless call falls within the class of wireless calls.

20. (Original) The method of claim 19, further comprising:
establishing the class of wireless calls.

21. (Original) The method of claim 19, wherein the predetermined
A1 action is screening the received wireless call.

22. (New) A method of screening emergency wireless calls, comprising:
receiving instructions from a Public Safety Answering Point (PSAP)
operator to initiate screening of wireless calls in a defined area;
receiving an emergency wireless call;
determining if the emergency wireless call originates from the defined
area; and
screening the emergency wireless call if the determining step determines
that the emergency wireless call originates from the defined area.

23. (New) The method of claim 22, wherein the instructions form the
PSAP operator specify the defined area.

24. (New) The method of claim 22, wherein the screening step

comprises:

A | connecting the emergency wireless call with an audio message.

25. (New) The method of claim 24, wherein the instructions from the
PSAP operator specify at least a portion of the audio message.
